JOEY CHEN

ENGINEERING MANAGER · TECHNICAL LEADER · BUILDER

Taiwan | zeichenjoyce@gmail.com | linkedin.com/in/joeyakk

SUMMARY

Hands-on engineering leader who drives architectural direction and builds autonomous teams that deliver without bottlenecks. Built and staffed five engineering functions (Backend, Frontend, SRE, Security, Data) while leading architecture and delivery for a multi-tenant B2B SaaS platform serving 10M user accounts across 18,000 educational institutions in 130+ countries.

Hired 20+ engineers with high yearly retention; currently leading ~17 engineers in product-aligned squads with end-to-end ownership. Consistent track record of shipping across diverse, high-complexity domains — real-time collaboration infrastructure, IoT fleet management, identity and access control, and compliance programmes — without stalling product velocity. Repeatable outcomes stem from squad autonomy, clear ownership boundaries, and architectural decisions that cut coordination overhead.

WORK EXPERIENCE

Engineering Manager

2022 – Present

ViewSonic / myViewBoard · Taiwan

- **ORG** Built and staffed five engineering functions from scratch (Backend, Frontend, SRE, Security, Data); hired 20+ engineers with high yearly retention; organised ~17 engineers into product-aligned squads with end-to-end ownership.
- **SCALE** Grew platform from 3,000 schools / 3M users (2021) to 18,000 institutions / 10M multi-tenant accounts across 130+ countries; scaled IoT device infrastructure ~4× from 80K to 300K+ concurrent Interactive Flat Panels; led the shift to service-based deployments, accelerating release cycles from weeks to within a day.
- **ARCHITECTURE** Architected the multi-tenant B2B SaaS platform with entity hierarchy, RBAC, and enterprise SSO (SAML, Azure AD) in compliance with FERPA, COPPA, GDPR, and PIPEDA; drove cloud solution adoption with AWS Solution Architects; implemented engineering practices aligned to SOC 2 across the organisation.
- **ARCHITECTURE** Architected TeamOne's multi-region backend around isolated regional service clusters (Messaging, Data, File, Proxy) across US, EU, and Asia — keeping collaboration state local to reduce cross-region latency and contain blast radius during partial outages. Built on Elixir/WebSocket, Aurora Global Database, and OPA — each chosen to match the concurrency, consistency, and access-control needs of a multi-tenant collaborative system.
- **OPERATING MODEL** Enforced cloud governance at scale via policy-as-code, making infrastructure changes auditable by default; mandated a structured deployment plan across all squads (release gates, change management, failover, rollback, post-deployment verification); replaced synchronous cross-team meetings with ADR-driven decision-making; served as technical interface for pre-sales, compliance bidding, and RACI ownership boundaries.
- **RELIABILITY** Held accountability for on-call rotation, incident response, and postmortem sign-off — ensuring production failures surfaced actionable remediation.
- **MEASUREMENT** Built an AI-powered engineering metrics framework using MCP integrations across Azure DevOps, GitHub Actions, Jira, and OpsGenie — surfacing previously siloed DORA metrics; extended to track AI coding adoption rates across squads.

Senior Developer / Tech Lead

2016 – 2022

ViewSonic / myViewBoard · Taiwan

- Led technical design of the microservices architecture, decomposing the platform along throughput boundaries so each service could scale independently.
- Developed the centralised identity provider (IDP) with enterprise SSO (SAML, Azure AD, Google), RBAC, and multi-tenant entity hierarchy — powering login across ViewBoard OS, Whiteboard, Entity Management, and Device Manager.
- Designed the real-time messaging layer over WebSocket and built the WebRTC-based wireless presentation system for screen sharing across IFPs and browsers.
- Advanced CI/CD pipelines in Azure DevOps by embedding DevSecOps gates — SonarQube (SAST), Dependabot, and OWASP ZAP (DAST) — alongside Terraform IaC across multi-region AWS deployments.
- Built the entity management system — hierarchical multi-tenant model with district-to-school relationships, role delegation, and device binding — serving 18,000+ educational institutions.

Associate Manager, Technical Dept.

Jan 2015 – Mar 2016

KTC Technology · Zhuhai, China

- Engineered a real-time healthcare communication platform using XMPP for device-to-cloud messaging, presence management, and telemedicine collaboration.

Earlier Career

- Lecturer, WPP School, Shanghai (2011–2015) · Senior System Developer, Medialand, China (2010–2011) · Contractor, WebGene, Taipei (2002–2007).

SKILLS

Hard Skills: AWS, Terraform, Terragrunt, Node.js, Go, Elixir, Python, Rust, PostgreSQL, Aurora, MQTT, EventStore, TypeScript, React, Azure DevOps Pipelines, CI/CD, SAST, Infrastructure as Code, System Design, Multi-tenant SaaS, IoT device management, Event-driven systems.

Soft Skills: Agile, OKRs, RACI, Leadership, FERPA, COPPA, GDPR, PIPEDA, SOC 2 readiness.

EDUCATION

National Dong Hwa University — Taiwan
B.S. in Physics

LANGUAGES

Chinese (Native)
English (Fluent for work)

CERTIFICATIONS

AWS Certified Solutions Architect – Professional — Amazon Web Services
Verify on Credly ↗

APPENDIX — PRODUCT CONTEXT

myViewBoard — Multi-tenant B2B SaaS platform for education. 18,000 institutions, 10M accounts, 130+ countries. myviewboard.com↗

TeamOne — Enterprise collaborative whiteboard. Multi-region Elixir/WebSocket backend across US, EU, Asia. teamone.viewsonic.com↗

Manager — IoT fleet management for 300K+ concurrent IFP devices via persistent MQTTS. viewsonic.com/us/myviewboard-manager↗

AirSync — Wireless screen mirroring and presentation for ViewSonic IFP devices. viewsonic.com/education/software/airsync↗
